

Planning to take ELEMENTARY ALGEBRA?

Starting in Summer 2018, all elementary algebra classes are being offered as a sequence of 2-credit “modules.”

All elementary algebra courses will be offered as a sequence of 2-credit “modules” instead of the traditional 4-credit semester-long courses. The modular format has helped more students get into college-credit math courses and get there more quickly. Moreover, student feedback has been overwhelmingly positive.

Don't be confused by the course numbers!
Lower course numbers mean *shorter* courses,
not lower-level courses.

What is a modular course?

- Each module is a 2-credit course that runs for half of the semester. Two modules cover the **same content** as a traditional semester-long course.
- Even though modular courses are shorter, they move at the **same pace** as traditional courses (each module covers half the content of a traditional course in half the time).
- Homework and quizzes will be done online using MyMathLab, which provides instant feedback and 24x7 online help.
- You will take two **short final exams** (one after each module) instead of one long final exam at the end of the semester.
- If you complete MAT 083 successfully, you will continue with MAT 084 during the second half of the semester at the same time and with the same instructor.
- If you do not complete MAT 083 successfully, you can retake the module during the second half of the semester, schedule permitting.

How do I register?

- Meet with your Academic Advisor or register through the Panther Portal.
- Register for two modules – MAT 083, which meets during the first half of the semester, and MAT 084, which meets during the second half.
- Choose modules that meet on the same schedule (i.e., **same section number**).
