

Planning to take INTERMEDIATE ALGEBRA?

Starting Fall 2017, all intermediate algebra classes are being offered as a sequence of 2-credit “modules.”

All intermediate algebra courses will be offered as a sequence of 2-credit “modules” instead of the traditional 4-credit semester-long courses. The modular format has helped more students get into college-credit math courses and get there more quickly. Moreover, student feedback has been overwhelmingly positive.

What is a modular course?

- Each module is a 2-credit course that runs for half of the semester. Two modules cover the **same content** as a traditional semester-long course.
- Even though modular courses are shorter, they move at the **same pace** as traditional courses (each module covers half the content of a traditional course in half the time).
- Homework and quizzes will be done online using MyMathLab, which provides instant feedback and 24x7 online help.
- You will take two **short final exams** (one after each module) instead of one long final exam at the end of the semester.
- If you complete MAT 085 successfully, you may continue with MAT 086 (if necessary) during the second half of the semester at the same time and with the same instructor.
- If you do not complete MAT 085 successfully, you can retake the module during the second half of the semester, schedule permitting.

How do I register?

- Meet with your Academic Advisor or register through the Panther Portal.
- Register for MAT 085. If you take MAT 085 during the first half of the semester and you are planning to take MAT 105 (College Algebra), register for the **same section number** of MAT 086 during the second half of the semester.
- If you are not planning to take MAT 105 (College Algebra) you only need to register for MAT 085. In other words, **you can skip MAT 086 and be ready for college-credit math after only 2 credits of intermediate algebra!**
- If you are not sure whether you need to take MAT 105, please meet with your Academic Advisor.
